Work Experience

Edra Labs (BrowserStack)

Jan 2026 - Present

Software Engineer Intern

- Engineered distributed **GPU** infrastructure on **Modal serverless** for an **applied physics mineral exploration** platform, powering geophysical inversion and Bayesian drillhole-targeting pipelines
- Architected a **horizontally scalable coordinator/worker GPU** system for the **EOI Bayesian** targeting algorithm with a shared single-**PCA/MPPCA** stage, eliminating up to **20×** redundant preprocessing and cutting per-run cost **~24%** via a **2.25×** faster prep phase
- Built **AI/LLM-powered** engineering-harness tooling, including automated **PR summaries**, a **Modal alerts** bot, and a **root-cause-analysis (RCA)** bot for faster pipeline diagnostics

Google Summer of Code @ OpenAFS Foundation

May 2025 - Aug 2025

Open Source Contributing Developer

- Selected for **GSoC 2025** among 50,000+ global applicants to optimize the **OpenAFS** distributed file system kernel module in **C/C++**
- Engineered **multi-page folio support** for kernel memory management, achieving **23% faster** throughput in stress tests (10k iterations, 2.5MB files)
- Migrated legacy page-based memory APIs to the modern **Linux folio** model and upstreamed patches through the maintainer code-review process for newer-kernel compatibility

Myraa Technologies

Oct 2023 - Jan 2024

Full Stack Developer Intern

- Built a full-stack healthcare management system in **Python** (Tornado) serving 500+ providers via **RESTful APIs**, backed by a **Neo4j** graph for patient relationships and **MySQL** for transactional data
- Implemented secure authentication and data validation, and deployed on **AWS EC2** with automated **CI/CD** using **GitHub Actions** and **Docker**

Projects

Korosuke - AI-Powered Document Security System | Python, LangChain, RAG, FastAPI, Vector DB

[Link](#)

- Built a **RAG**-based document security system over 2,300+ enterprise documents using **LangChain**, a **vector database**, and custom **embedding models** for **semantic search** and security-aware classification
- Designed a modular **FastAPI** backend with **role-based access control**, **authentication**, **audit logging**, and policy-based filtering for enterprise compliance

Campus Automation: IT Solution Suite for SRMAP | Python, FastAPI, NGINX

[Project Link](#)

- Developed and Deployed an **Outpass System**, which made the university procedure 100%paperless and **reduced task completion time by 90%**. The platform currently has over 10,000 active users.
- Implemented **OAuth2 Login**, **Telemetry Logging**, **Admin Dashboard**, **Data Analytics**, **Data Migration Utility** and **User Management Console**.

BURP - Blockchain Unified Rebalancing Platform | React, Node.js, Solidity, LangChain, PYUSD

[Link](#)

- Winner, EthGlobal New Delhi PayPal (PyUSD) Track: conversational AI agents (LangChain & LangGraph)** turn natural-language goals into **personalized token clusters** for one-click, jargon-free crypto investing
- Engineered **Solidity** smart contracts for **single-transaction cluster purchases**, settling one **PYUSD** payment across multiple **DEXs** to auto-swap and distribute tokens, eliminating repeated signatures

Technical Skills

Programming Languages

Python, JavaScript/TypeScript, C/C++, SQL

AI/ML & Data

LangChain, Vector Databases, Data Structures & Algorithms

Frameworks & Technologies

React.js, Node.js, Express.js, FastAPI, Next.js, RESTful APIs

Databases & Cloud

MongoDB, MySQL, PostgreSQL, Redis, AWS (EC2, Lambda, S3), Docker

Tools & Methodologies

Git, CI/CD, Agile, TDD, Jest, GitHub Actions, System Design

Education

SRM University, Andhra Pradesh

Sep 2022 - Jul 2026

B.Tech in Computer Science and Engineering (AI & ML)

CGPA: 8.8/10.0

Leadership & Achievements

- Hackathons: Winner** — EthGlobal New Delhi (PayPal PyUSD Track); competed in EthIndia, Unfold, SIH, and other national hackathons
- Problem Solving:** Solved **300+** data structures & algorithms problems on **LeetCode**
